

16. Project Executable Files

Date	5 July 2026
Team ID	SWTID-2026-8135
Project Name	EduGenie – Google Gemini Powered Learning Assistant
Maximum Marks	3 Marks

Step 1: Submission Checklist

S.No	Item to Submit	Submitted
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes (README.md)
3	requirements.txt / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes — er_diagram.md + JSON files auto- seeded by init_db()
5	Environment configuration file (.env.example)	Yes
6	Deployed application URL (if hosted)	yes
7	APK / Executable binary (if applicable)	yes
8	Dockerfile / Containerization config	Yes
9	Test files and test results	Yes (tests/test_api.py)
10	Demo video or walkthrough	yes

Step 2: File / Folder Structure

main.py · config.py · qna.py · explanation_module.py · quiz_module.py · summary_module.py · learning_path.py · requirements.txt · Dockerfile · README.md · workflow.md · er_diagram.md

- models/ — schemas.py (Pydantic request/response models)
- utils/ — db_manager.py, gemini_service.py, local_t5_service.py
- templates/ — base.html, index.html, chat.html, explain.html, quiz.html, summary.html, recommend.html, about.html, contact.html
- static/ — css/, js/ (chat.js, explain.js, quiz.js, summary.js, recommend.js, main.js), style.css
- data/ — users.json, queries.json, responses.json, quizzes.json, summaries.json, learning_paths.json (auto-created on first run)
- tests/ — test_api.py

Step 3: Deployment / Access Details

Hosted / Deployed URL	https://edugenie-google-gemini-powered-learning-n2zf.onrender.com/
Login Credentials (Demo)	No need of Credentials
Platform / Hosting Provider	Render
Repository Link	https://github.com/deepthi3535/Edu_Engine_Google
Demo Video Link	Demo link

Step 4: Run Instructions

- 1. Clone the repository: `git clone https://github.com/deepthi3535/EduGenie-Google-Gemini-Powered-Learning-Assistant.git`
- 2. Install dependencies: `pip install -r requirements.txt`
- 3. Copy `.env.example` to `.env` and set `GEMINI_API_KEY` (optional — app runs in demo mode without it)
- 4. Run the server: `uvicorn main:app --reload`
- 5. Open `http://127.0.0.1:8000` in a browser
- Alternative (Docker): `docker build -t edugenie . && docker run -p 8000:8000 edugenie`

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Duplicate router-based (<code>/api/...</code>) and direct (<code>/qa, /quiz, ...</code>) endpoints for the same features	Both work correctly today; consolidation is planned as future cleanup
2	JSON flat-file storage is not safe under high write concurrency	Acceptable for demo/classroom scale; migration to a relational DB is on the future roadmap
3	No authentication / authorization	All activity is currently logged under a single seeded demo user
4	CORS is open to all origins (<code>allow_origins=["*"]</code>)	Fine for local development; must be restricted before public deployment
